

ELECTRIC FAN HEATER

# B9 EPB

## FUNCTIONING PRINCIPLES

The device works on the principle of forced convection. The air flow is forced fan. Cold air is drawn in the back of the unit. Further, when flowing from the heater, it receives heat. The heated air is expelled in front of the heater. The device has a thermostat for the regulation of temperatures 5-35 °C. The unit area is equipped with thermal protection with reset. The unit features: ventilation, heating with half the power, heating at full power. The device has a cooling thermostat.
